(54) Title: OPTICAL FILTER, DISPLAY UNIT AND TOUCH PANEL UNIT

(57) Abstract: To provide an optical filter, which has good repeeling properties and does not generate thermally decomposed products from an adhesive layer adhered to a part of a device, or generates thermal decomposed products which hardly remain, even when the optical film is installed and used inside the device. In an optical filter comprising an optical film and containing an adhesive for adhering said optical film to an adherent surface on the surface of said optical film or inside said optical film, the adhesive comprises a olefin polymer so that it has a repeeling property from the adherent surface.
